ABSTRACT

Custom cast dowel post & commercially available screw post mainly restores the lost tooth structure either because of trauma, attrition, caries or parafunctional habits. These conditions need to be restored in order to give psychological and functional comfort. This study was carried out in vivo in 60 subjects comprising both male and female. The aim of present study was to compare the longevity of custom cast dowel post & commercially available screw post. Clinical considerations and treatment methods of such conditions are reported and discussed.
